

FEEDBACK FROM OUR LEARNERS

My name is **PANOM MAJOK** learner from Rescue Wing Lab, Sudanese by Nationality living in Kenya, Kakuma refugee Camp. ICT Course is one of my dream career course which I see will help me to succeed in life, this program has improved my skill and I can rate myself 8/10 of the improvement.

During the program I would like to say that my cooperation with teacher was closed and it helped me a lot to access solution to the difficulties I went through. I just want to take this gold opportunity to thank our donor Connection Ubuntu for helping us refugees girls to access computer class through Rescue Wing Lab and also I want to thank Facilitator for taking me through program.

My recommendation to the donor and Rescue Wing Team, it will be more helpful if the Lab can add other computers and chairs so that other girls who are in need to gain the opportunity and I also need advance class. Thanks again

NAME: SUSAN ISAAC

COMPUTER LAB: RESCUE WING

I pursue the training because it is so benefit to me, I want to gain knowledge and skill so that I can train other girls within my community. our school curriculum changes and I see in future we will start to use computers for the normal education. My requirement needed in order to make our learning so effective, the sponsor will need also to assist us with implementation of the other technology program on the ground so that we can be strong in ICT, I want to learn advance and job opportunity online. Before I was unable to type but now am doing better, sometimes I used to be busy with the home chores, my sister used to command me to help her in the hotel which interfere with my class but now I started to use computer to organise hotel purchase and clients name, she started to see the important of learning computer. Thank you Rescue Wing and it donor for bringing the program to us, this program helps me a lot.

My name is **NASMA NABIL**, student from Rescue Wing computer class, I like to know more about the programming of computer, the computer knowledge will benefit me in future. Getting space to join the computer class within the community it was not easy but I thank God through the help of friend I came to know that Rescue Wing is among the best place for Girls to gain computer skill without any inconvenience. Before I join the class I did not know what to do because it was my first time to enter computer room, but I remember I started with Rapid Time after basic explanation of Keyboard and how to open and put off devices. I have improved many things concerning computer, including printing document during work time, now I need extra time to go through what I learnt during the program. Today I want to send my thanks to everyone who is making this program run within our community, Especially Donor and teacher they went through a lot to organise this program to be implemented within the community. My recommendation is to encourage other girls to join this program so that it can help them in future, we really do not have any vision with life of kakuma refugee camp if we cannot focus such opportunity.
